

Centier Bank Corporate Center Merrillville, Indiana

The new corporate office for Centier Bank was designed to be a signature building. It is located near the highly visible intersection of Interstate 65 and Highway 30 in Merrillville, Indiana.

The architecture is unique. The five stories above grade are clad with an all reflective blue glass facade. The building shape is circular in design and crowned by a distinctive feature (lighted at night) that is patterned after structures in Asia. The landscaping and site design include an entry plaza mounding, water fountain and many plantings.

This project was one of the first of its kind in using Building Information Management (BIM) Technology for its design. 3-D structural analysis model seamlessly interactive with MicroStation Plan Generation, full connectivity with architectural and other disciplines led Bentley Systems to nominate this project for an Award in Excellence.
